Hemodialysis is easier now with customized kits

We offer single use sets for connection & disconnection procedures in each hemodialysis fistula and catheter therapy. These sets are made of supplementary components that create complete kits tailored to your individual needs and practices while providing you the safest and the easiest solution.

MAKING YOUR LIFE EASIER WITH A WIDE RANGE OF ON/OFF KITS

Customized series of procedure sets are exceptional time and costs savers not only for medical professionals but also for administrative and support services.

Benefits of using customized kits:

- **Reduced preparation times** as all items are ready to use at the exact needed time: preparation time decreases approximately 50% compared to traditional preparation methods.
- **Reduced risk of cross infection** as all needed components are ready to use & sterile in a single package
- **The sets include all necessary elements** to ensure optimally prepared procedures and avoid stress due to lack of the required items during interventions
- **Efficient warehouse management** that simplifies the ordering process: one set means one procedure
- **Financial and administrative optimization**
